

## Project

Password hashing application

## Issue Type

Feature Request

## Summary

Display of carriage return could be better in Terminal

## Priority

Trivial

## Description

Steps to reproduce:

1. Open Terminal and run the following command:  
`curl -X POST -H "application/json" -d '{"password":"angrymonkey"}' http://127.0.0.1:8088/hash`
2. The command above will give you value (a number) in a carriage return, five seconds after running the command.
3. The number returned after following step 1 looks a little mushed up right next to the name of the machine.

See attached screenshot.
